

Identify. Streamline. Comply.

With improving the accuracy of patient identification now the number one National Patient Safety Goal, more and more organizations are looking to Taylor Healthcare as their partner. Drawing on more than eight decades of healthcare experience, we help providers build and sustain the foundation for safer, more cost-effective care. We start with an unparalleled line of quality laser wristbands and labels, then we complement it with our industry-leading technology to produce them with patient demographics, photos and bar codes. We call it **positive patient identification**. Our clients call it remarkable because our solution enables them to establish a new level of patient safety and operational efficiency, while helping them comply with regulatory requirements.
